INTRODUCTION

The Question Has Already Been Answered

The question is no longer *whether* AI will transform industrial operations. It already is.

As an executive in chemical manufacturing or gas distribution, you're operating in one of the most complex, capital-intensive, and margin-sensitive environments in the North American economy. Feedstock volatility, tightening environmental regulations, aging workforces, pipeline integrity requirements, and relentless pressure to improve throughput while reducing cost: these are not new problems. But AI is offering genuinely new answers to them.

This guide was written specifically for leaders at mid-market companies — those with revenues between $50M and $800M — where the stakes of getting AI right are especially high. Unlike
